

6th SCLForum 2018 "SMARTER SUPPLY CHAINS"

Supply chains are transforming into more effective and efficient due to digital technologies. We evolve them by creating integrated supply chains with our value networks: customers, suppliers and partners, and exchanging data with them, thereby increasing the transparency of the entire supply chain.

Smarter supply chains are dual, where physical and virtual worlds provide customer-centric value through cyber-physical objects interaction, data decision-making processes, open collaboration... Definitely, new ways of management for new ages. Strategy, not technology, drives supply chain transformation.
